DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/8/2010 has been entered.

Election/Restrictions

2. Claims 6-8 and 12 are directed to an allowable apparatus. Pursuant to the procedures set forth in MPEP § 821.04(B), claims 6-8 and 12, dependent on an allowable apparatus, previously withdrawn from consideration as a result of a restriction requirement, are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Because all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, **the restriction requirement as set forth in the Office action mailed on 6/8/2009 is hereby withdrawn.** In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the

claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

3. Claims 1-14 and 21-29 are allowed.
 4. The following is an examiner's statement of reasons for allowance: claims 1 and 21 of the invention as claimed are not shown in the prior art of a plasma apparatus comprising a substrate having a first and opposing surface, a second surface spaced from said first surface and connected to a power supply as a cathode, and a third surface connected to the power supply as an anode and especially with regard to:
 - a permanent magnet oriented with a north pole proximal to said substrate relative to a south pole and under said substrate providing a magnetic field axial with said permanent magnet under said substrate, said magnetic field passing into both said first and second surfaces and through said gap, said magnetic field having a portion passing through said substrate that is at least two times stronger at said first surface than at said second surface, said magnetic field portion having a strength strong enough to magnetize electrons; and an electric field extending to said second surface and said electric field penetrating into an electron confining region of said magnetic field to confine the electrons electrostatically and with mirror magnetic confinement.
- Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
